

LET LAWN DOCTOR HELP YOU GET TO THE ROOT OF THE PROBLEM

Spring and/or Fall Core Aeration

Your lawn needs basic elements such as water, oxygen and nutrients to survive, but they can have a hard time finding their way to your plants through compacted soil. Here in Northeast Ohio, with primarily a clay based soil, and day in and day out use of our lawn space, the soil gets very compacted from season to season.

Core Aeration is the physical act of creating "pores" or crevasses in the soil to work against the compaction that is created naturally over time by gravity and "life". With our **Core Aeration**, we create deep channels all over your yard, allowing sunlight, oxygen and water to penetrate down to the root zone to support ongoing growth and giving that new growth space to grow into;

By allowing the sunlight, oxygen and water to penetrate down to the root zone, we can effectively promote and support new and ongoing growth and maintain the health of your existing grass. Dramatically helping to make your lawn the envy of your neighborhood!

*Ask about the added benefits of doing a **Core Aeration** in conjunction with our **Soil Enrichment** application - **THE RESULTS ARE AMAZING!**

- ✔ Improved air exchange between soil and atmosphere
- ✔ Enhanced soil water uptake

- ✔ Improved fertilizer uptake and use
- ✔ Reduced water runoff and puddling
- ✔ Stronger turf grass roots
- ✔ Reduced soil compaction
- ✔ Enhanced heat and drought stress tolerance
- ✔ Enhanced thatch breakdown
- ✔ Fall Core Aeration can be done with overseeding to thicken and fill in a thinner lawn for a healthier weed free environment.
