

# YOUR LAWN SHOULD FEEL THIS GOOD.

## ORGANIC MAINTAINER CARE PROGRAM

Keeping your lawn healthy and green is a demanding year-round commitment, so let your Lawn Doctor professionals take care of all that work for you.

Our 6-service Lawn Maintainer Care program includes a certified organic fertilization option at each application. Applications are done about every 4-6 weeks.

Lawn Doctor does not apply one-size-fits-all lawn care. Each lawn is unique, with its own needs. Your Maintainer Care Program is specialized based on your lawn's soil composition and specific conditions. We work with your soil to understand and design your program to bring your lawn into the right balance for optimum long-term health.

Your experienced technician will continuously monitor the progress and keep you informed through after service messages about your lawn's progress all season.

➔ **Tip Alert!- Spring Aeration is Great**

Aeration and Soil Enrichment in the spring is the best way to promote a healthy growing environment for a spring start. Give your grass a fresh beginning every Spring!

➔ **Tip Alert! - Fall Aeration with Overseeding**

Grass is a living plant and needs to be replenished every so often. A thin lawn is a weeds best friend! If you are trying to promote an organic weed free lawn without the use of herbicides, it will be essential to maintain a full lawn with new grass plants every year.

➔ **Slow Release Granular Fertilizer**

Since the fertilizer that we use is granular and encapsulated, it provides a continuous supply of nutrients to the soil as it slowly breaks down.

➔ **Tip Alert!**

For best results, fertilizer should be watered in 24-48 hours after an application.
