

OUR SUSTAINABLE APPROACH

Our custom blended, organic based fertilizer was developed specifically for the soils and climate right here in the St. Louis/St. Charles area. Our program encourages the growth of beneficial micro-organisms in your soil. These organisms stimulate plant activity and by utilizing our patented, ground metered Turf-Tamer line of equipment you get an even application each and every time. Now that's how you get results.

As part of our Eco-blend system we incorporate biological, cultural, physical and chemical controls to keep your lawn **weed free**. Sometimes this means just pulling the weed, if not, we will treat them. Simply put, we inspect your property on each visit and only treat when and where there's a problem, if there is a problem.

Our program is customized for St. Louis and further tailored for each individual lawn with each application. Every lawn is different & each homeowner has a different expectation, we make them match. We will look at your goal for your lawn and develop a plan to get you there.

That's guaranteed!
