Volume 3 Round 3 Spring 2024

Lawn Doctor's Mosquito Control Services

Lawn Doctor of Charleston's exclusive Yard Armour® program can help you protect your family and pets by treating your entire yard. While no product can eliminate 100% of pests, our Yard Armour program will drastically cut down on mosquito populations and reduce the likelihood of re-infestations. What makes it so effective? We take a multi-treatment approach that coincides with the various life cycle stages of mosquitoes. Applications are scheduled at times that are designed to deliver optimal results. Once your mosquito problem is under control, we provide ongoing maintenance applications to keep your yard protected at all times. In addition to regular treatments, we will guide you on how to reduce

mosquito populations on your property, like removing debris and woodpiles and cleaning up any areas with standing water.

Seeing a couple of grubs in your lawn is a cause for concern. Even if your lawn is healthy it can still be damaged by just a few sub-surface insects. If you're noticing grubs in the lawn or Japanese beetles on your trees and shrubs, then you've got a problem. Some other signs to look for include:

- Areas of turf that feel spongy to walk on.
- Birds and other small animals (like raccoons and moles) that are suddenly tearing up your lawn in search of food.
- Dead patches of grass – despite adequate watering – that have irregular shapes.

If you suspect you have a grub infestation, one way to check is to cut out several sections of turf that are about one square foot and a couple inches deep. If your lawn has grubs, you'll see them feeding in the soil.

Lawn Doctor's Soil Enrichment Program

Lawn Doctor's Soil Enrichment 3-step Program includes soil-enhancing elements such as sea kelp, humic acid, liquid aeration and much more. It is a proprietary blend that helps your lawn thrive during the stress of summer. This sets us apart from the competition. We utilize golf course turf practices to deliver this proprietary of vitality important ingredients. These vitally important ingredients improve your soil structure so that your lawn can flourish.

Soil Enrichment Program includes:

- Humic acid
- Sea Kelp
- Liquid Aeration
- Microbe Stimulants
- And much more!

EARTHWORMS CAN IMPROVE YOUR GARDEN AND SOIL HEALTH

Earthworms are not just slimy creatures. They play a vital role in improving the quality of soil in your garden.

Earthworms help to break down organic matter, aerate the soil, and improve drainage.

They also produce nutrient-rich casts that are excellent for plant growth. Adding earthworms to your garden can help to improve the health and yield of your plants. If you see these mounds in your lawn, they are only there to help.

Core Aeration	VS	Liquid Aeration
		
<ul style="list-style-type: none"> • Messy/Muddy Plugs • Risk Of Damage To Property • Requires Preparation • Amazing Results 		<ul style="list-style-type: none"> • No Messy/Muddy Plugs • No Risk Of Damage To Property • No Preparation • Amazing Results

The Charleston area has very diverse soil types from one end to the other. We have sand on the beaches, and heavy clay inland. In some cases, there are next-door neighbors with totally different soil types! Luckily Lawn Doctor has a solution and a service that will help with all soil types. Side note. We kept running into problems while mechanically aerating such as shallow wires and irrigation lines, shallow phone or cable lines, termite bait stations, underground dog fences, and on and on!! So we went to work and found a product that is super beneficial to all soil types, all turf types, and completely stops all the frustrations we had with mechanical aerations. better with time. Better color, deeper root growth, and better drought resistance, are some of the benefits of liquid aeration.

Don't be misguided.....Mole Crickets are not earthworms!

Mole crickets are commonly mistaken for earthworms. These are pictures of mole cricket tunnels. Mole crickets are not beneficial to turf. Mole crickets will feed on the roots of grass and other plants. Mole crickets tunnel through the top 1-2 inches of soil, loosening it and uprooting grass plants that then dry out and die. Lawn Doctor guarantees our mole cricket service for 6 months. Call us with any questions @ 843-873-5711
