

What is Accomplish LM?

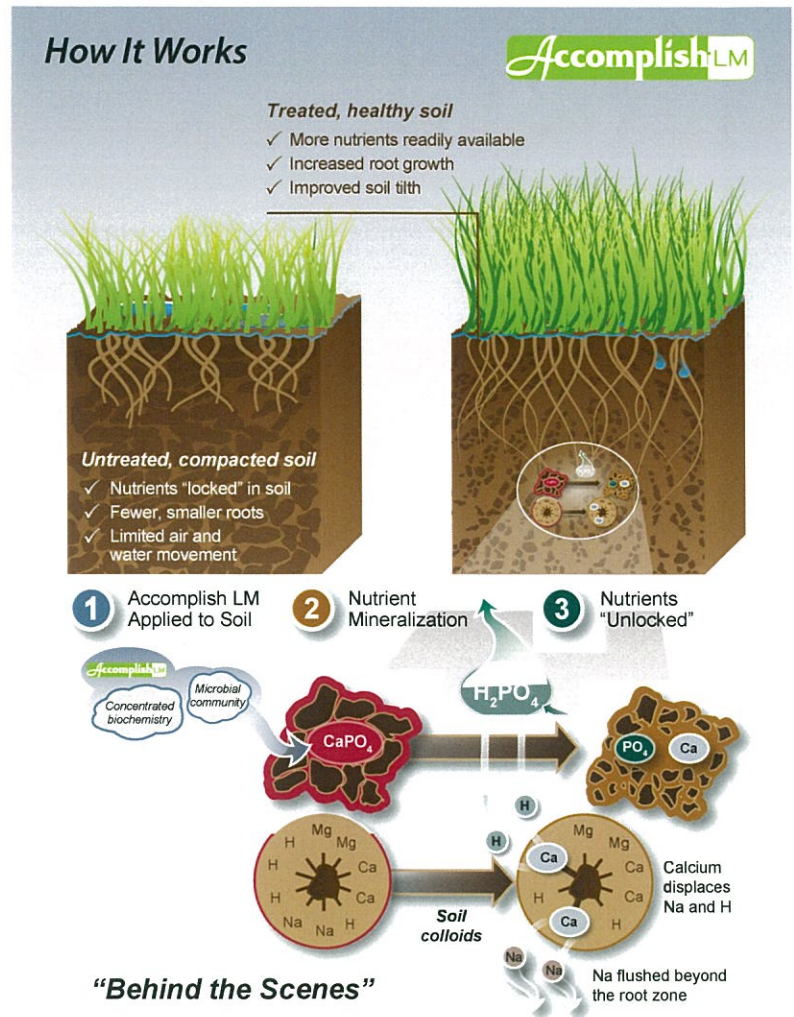

Accomplish LM is a biochemical fertilizer catalyst distributed by Loveland Products, a subsidiary of Crop Production Services (CPS). Accomplish LM helps turfgrass managers and growers enhance the performance of their fertilizers in the soil system and get the most out of their fertility programs. Accomplish LM is specifically formulated for use with liquid fertilizer and broadcast applications.

Product benefits include:

- Increased fertilizer availability
- Improved plant performance
- Enhanced nutrient use efficiency
- Outstanding potential ROI
- Mineralizes nutrient sources to increase nutrient availability
- Enhances root growth & improves nutrient & water uptake

How does Accomplish LM work?

Accomplish LM improves the availability and uptake of nutrients from fertilizers and soil nutrient sources. It also increases root size and branching, so that more of the root system can take up nutrients and water. Roots also respond to Accomplish LM by directly increasing nutrient uptake, and by influencing plant-microbe interactions in the soil to make nutrients more available to the plant.
