

LAWN CARE MAINTAINER PROGRAM

Keeping your lawn healthy and green is a demanding year-round commitment, so let your local Lawn Doctor professionals take care of all that work for you. We offer a 7-service lawn care maintainer program that includes fertilization and weed control with each application. Our specialized Lawn Maintainer program will provide your grass with a unique fertilization plan to suit our growing conditions, as well as the specific conditions of your yard. When fertilizing, our experienced team always uses slow-release fertilizers that are high in nutrients to guarantee lush and long-term grass fitness. Applications are done about every 6 weeks, and we will come out between services at no extra charge to take care of any weeds that may crop up or address any other issues you may have.

WHAT WE USE

- ➔ Top Quality Fertilizer – We use a combination of liquid and granular products that will offer a steady supply of nutrients to the soil.
- ➔ Weed Control - Pre-emergent weed control is used and applied on service 1 and 6 to prevent weed seeds from germinating. It is used along with a liquid post-emergent for weeds that are already growing.
- ➔ TIP ALERT! Liquid weed control needs about an hour without rain/watering to completely soak into the weeds. Avoid mowing for 24 hours to allow the product to start moving into the weeds' root systems.
