

**THE GRASS
IS GREENER
OVER HERE.**

Healthy soil is key to a healthy lawn. Schedule a Soil Enrichment Service today to start improving your lawn tomorrow.

Lawn Doctor's Soil Enrichment Service

- Soil Enrichment is a fertilizer catalyst that makes fertilizer more efficient by conditioning the soil to allow more nutrients into the grass and improve grass health
- Creates a stronger and healthier root system so that the grass can better withstand stress (heat, drought, insects, disease, etc.)
- Loosens soil & reduces thatch (an alternative to mechanical core aeration)
- Increases grass nutrient absorption
- Improves soil water retention so you can water less
- Before the heat of the summer is best time for Soil Enrichment – it improves the lawn's stress tolerance and can be applied in conjunction with lawn maintainer services 3 and 4.
