## LIME SERVICE BULLETIN

**Today we applied lime to your lawn.** We use an improved type of lime formed into small pellets that dissolve slowly with rainfall. This lime is extremely effective and eliminates the dusty white mess associated with powdered lime applications.

When a soil becomes too acidic, some nutrients used by the grass plant become unavailable. To insure maximum nutrient availability, soil pH must be in the optimum range.

The benefits of a lime application include:

- Lime naturally brings the pH (acidity) level in balance with recommended levels for healthy lawns.
- Lime slows thatch build-up, which can choke growth and reduce turf density.
- Lime increases the effectiveness of fertilizer by making it more readily available to the grass plants.
- Lime reduces the possibility of lawn fungus problems.

Over time, our Lime Program will help you achieve a healthy, deep green lawn. Since Lime works very slowly to improve your soil, you will not see any immediate, dramatic effect from the application, but over time you will see improvement in the vigor of your lawn.

Please call if you have any questions regarding this service. Thank you for using Lawn Doctor.

**For your convenience, service continues from season to season.
